

## SUMMARY OF HOW WE CAN SUPPORT YOUR BUSINESS WITH OUR COVID-19 WORKPLACE TESTING

We are able to offer Antigen PCR (throat and nasal swab) and Antibody (IgG) testing for COVID-19. Our sample collection staff will attend each location to collect a throat/nasal swab for the PCR Antigen test and/or venous blood samples for the Antibody test (IgG). A suitable time for our collection staff to arrive will be arranged, with all the necessary PPE to ensure that the sample collection process causes the minimum of disruption to your workplace.

**The service is based on testing a minimum of 10 members of staff from any given location. The samples will then be couriered back to the laboratory at Leeds and you will receive results within 24 - 48 hours from sampling.**

**Throat swab testing by PCR** - viral antigen swab tests check to see if you currently have the virus. This test is used to directly detect if the staff member is infected with virus at the time of testing.

**£85 per test**

**Blood Antibody testing by ELISA** - blood testing for the presence of IgG antibodies against COVID-19. These antibodies indicate that you may have had COVID-19 recently and have developed antibodies that may protect you from future infection. It is unknown, at this point, how much protection antibodies might provide against reinfection.

**£50 per test**

**If you wish to test smaller numbers of staff members in different locations**, we can provide the antigen PCR test via self-collection of throat and nose swab samples. This sampling method will also allow you to test any staff potentially demonstrating symptoms and self-isolating at home. We can arrange for a self-collection swab kit to be sent directly to the individual and posted back to the laboratory.

**£77 per test**

**If you require Antibody testing but have less than 10 staff** and would like to arrange testing with another workplace or you have several branches, we could arrange for sample collection to be situated on one site and staff details and results to be processed separately. The samples can then be collated and couriered directly to our laboratory.

Following recent advice from the MHRA antibody testing must be undertaken by a venous blood sample, so we are not currently offering self-collection by finger prick. **If you are able to obtain your own venous blood samples**, we can offer

**£42 per test**

All prices are subject to adding VAT. We are happy to liaise directly with your HR team or a member of staff on each site and support them fully with the sampling requirements, laboratory testing and any follow up testing.
